LEAPS ENTERPRISES LLC

FURNITURE, FINISHES AND A COHERENT SETTING

From pool deck to private cabana.

03-05	Sun loungers & daybeds
06-08	Bean bags & local filling
09-11	Umbrellas & cabanas
12-14	Tables, materials & covers
15-17	Setting, installation & support

Collection photography and configurations are illustrative. Dimensions, materials, engineering and availability are confirmed by quotation and approved sample.

A place to linger.

A considered outdoor collection for resort
pools, beachfronts and private terraces.

REFINED PROFILES FOR DAILY USE

The essential resort lounge.

SPECIFICATION DIRECTION

Approx. 195–205 cm long × 65–80 cm wide. Final size, seat height and recline confirmed by model.

CONSTRUCTION CHOICES

Powder-coated aluminium with sling, or teak with a separate cushion system.

Load, stability, pinch-point safety, corrosion exposure and replacement components must be reviewed for the actual selected model.

A MORE GENEROUS KIND OF COMFORT

Space to share. Room to unwind.

SINGLE & DOUBLE FORMATS

Project directions around 140–180 cm wide and 190–220 cm long; final dimensions by selected model.

CUSHION SYSTEM

Specify foam, cover, drainage route and retention. Agree spare cover quantities at purchase.

No standard load capacity is implied. Frame, cushions and seating configuration must be approved as a complete product.

02 / RELAX

An informal note. A considered construction.

Relaxed seating for beach clubs, pool lounges and casual outdoor zones. Choose the silhouette first, then resolve cover, liner, fill and maintenance.

Bean bags are for dry-land seating only unless a separately tested and explicitly approved water-use product is specified.

CHOOSE THE POSTURE AND FOOTPRINT

Lounge, seat or settle in.

Lounge chair

Indicative footprint: 90–110 cm wide.
Shaped seating with a supportive back.

Floor lounger

Indicative footprint: 140–180 × 80–100 cm. A
lower, more reclined posture.

Round pouf

Indicative diameter: 70–100 cm. Flexible
additional seating or footrest.

Concept photograph and configuration sketches. Final footprint depends on fill volume, construction and user load; approve a full-size sample.

A MODULAR APPROACH TO REPLACEMENT

Import the cover. Resolve the fill locally.

- | | | |
|----|------------------------|--|
| 01 | Outer cover | UV-appropriate textile, reinforced seams and protected zip. |
| 02 | Inner liner | A separate fill containment layer for service and repair. |
| 03 | Local filling | EPS or another approved fill, with confirmed density and volume. |
| 04 | Ongoing support | Retain spare covers and specify a controlled refill process. |

Cost savings require an actual volume-and-freight comparison. Secure zips and fill containment are essential, particularly around children.

03 / SHADE

A classic line of shade.

SIZE DIRECTION

Square 2.5 × 2.5 or 3 × 3 m; round 3–4 m. Final canopy and frame by project.

COMPLETE SPECIFICATION

Frame, canopy, operating mechanism, base, surface and exposure considered together.

No generic wind-speed or ballast claim. The tested complete system and site conditions determine the safe operating procedure.

OFFSET STRUCTURE. OPEN SPACE BELOW.

Shade without the central pole.

CONFIGURATION

Typical enquiry directions: 3 × 3 or 3 × 4 m. Rotation, tilt and clearances depend on the chosen mechanism.

BASE & ANCHORAGE

Confirm slab, paving or ground condition; underground services; wind exposure and engineered fixings.

CONCEPT ELEVATION

OPERATING PLAN

Agree when to close, secure and remove the canopy. Staff training is part of handover.

Configuration sketch only. Base weight, anchorage and wind limits must be validated by the selected manufacturer and competent installer.

A DESTINATION WITHIN THE DESTINATION

Private shade. A distinct setting.

PROJECT DIRECTION

Approx. 2 × 2 m or 3 × 3 m footprints. Frame height, roof and access are project-specific.

TEXTILE ELEMENTS

Curtains, cushions and tie-backs can be coordinated with adjacent loungers and towels.

Permanent or semi-permanent structures may require approvals and engineered anchorage. Confirm site permissions before manufacture.

KEEP THE SETTING COMPLETE

The smaller pieces that make it work.

SIDE TABLES

Compact tables beside loungers and daybeds. Select a stable, cleanable top and corrosion-appropriate construction.

OUTDOOR CUSHIONS

Seat pads, headrests and scatter cushions, matched to the furniture and retained against movement.

OPERATIONAL ADDITIONS

Towel stations, towel-return points, covered storage and mobile service pieces can be sourced against a separate brief.

Supporting items are project additions, not confirmed stocked products. Dimensions and maintenance access are resolved with the site team.

A PALETTE FOR COASTAL SETTINGS

A restrained palette. A deliberate specification.

ALUMINIUM

Grade, coating system, weld quality, fasteners and corrosion evidence.

TEAK / TIMBER

Species, sourcing evidence, finish and the expected weathering character.

OUTDOOR FABRICS

Fibre, solution-dyed construction where selected, UV and colourfastness data.

FOAM & SLING

Density, recovery, drainage, tension and replacement route.

Ivory / sand / stone / charcoal
Gold is a brand accent, not a required
furniture finish.

"Marine-grade" and "Sunbrella-grade" are not substitutes for a specific material and test report. Brand-name fabrics require authentic supply evidence.

PLAN FOR THE SECOND SEASON

A replacement programme, by design.

TEXTILE SPARES

Canopies, cushion covers, bean-bag covers and inner liners.

MECHANICAL SPARES

Ribs, handles, glides, fasteners and operating components.

PROTECTIVE STORAGE

Fitted covers and dry, ventilated storage sized to the furniture.

CARE DOCUMENTS

Material-specific cleaning, inspection and closure procedures.

Warranties, exclusion conditions, spare-part availability and replenishment lead times must be agreed in the purchase contract.

ONE VISUAL LANGUAGE, ACROSS THE DECK

Three settings to build around.

Pool deck

Loungers + compact tables + centre-pole shade + pool towels.

Beach lounge

Bean bags + poufs + side tables + cover-and-refill programme.

Private retreat

Cabana + double daybed + coordinated curtains, cushions and towels.

Illustrative combinations, not package prices. Final layout follows clearances, circulation, accessibility, shade and site operating needs.

FROM SETTING TO SITE

Resolve the installation before the order.

- | | | |
|----|------------|---|
| 01 | Survey | Layout, access, floor levels, wind exposure and substrate. |
| 02 | Specify | Model, finish, complete base system and required tests. |
| 03 | Coordinate | Approvals, method statement, installer scope and delivery access. |
| 04 | Handover | Assembly checks, operating instructions, care and spare-parts record. |

Structural fixings and wind-related design require competent, project-specific engineering. Leaps' final scope must be stated in the quotation.

START WITH THE SETTING

Tell us how the space will be used.

BRIEF	WHAT TO PROVIDE
Location & exposure	Beachfront / pool deck / terrace; wind, salt and surface conditions.
Layout & quantity	Site plan, dimensions, seating count and circulation clearances.
Products & identity	Loungers, bean bags, shade, cabanas; fabric and frame preferences.
Installation	Access, anchors or ballast, substrate information and approvals.
Delivery & support	Required date, phases, storage, spares, maintenance and warranty scope.

Send a site plan, reference photographs or a bill of quantities.

A site review and approved sample/model establish the final offer. Dimensions in this catalogue are enquiry starting points.
